

ARCAM

FMJ A18 Integrated Amplifier

- Audiophile Integrated Amplifier
- Powerful 50wpc continuous output
- Flexible logic controlled pre-amplifier
- Moving Magnet phono stage
- Resonance damped chassis
- Toroid power supply
- CR10 system remote control
- Class leading sound quality

A18 Integrated Amplifier

The A18 represents an ideal introduction to true Hi-fi amplification. It's sleek design, flexible connectivity and powerful amplifier stages deliver a level of reproduction far beyond that of "budget" separates systems. Using the latest in amplifier technology plus over thirty years of audio design experience the A18 is an astounding amplifier, true to Arcam's tradition of affordable excellence.

Using very high quality components and carefully designed multi-layer PCBs the A18 is designed for performance from the ground up. Connectivity is highly flexible allowing direct connection of seven line level sources including a dedicated 3.5mm front panel jack socket for portable music players.

Operation of the A18 is simplicity itself. A rotary encoder allows precise control over volume and other selections such as tone controls and balance. This means delicate audio signals need not travel to and from the front panel or through potentially noisy mechanical potentiometers or switches.

The A18's large power supply uses a toroid transformer which ensures an extremely quiet backdrop to music and superb stability during large bass transients. The chassis features a damped "Sound Dead Steel" construction virtually eliminating mechanical influences on the electronics.

As part of Arcam's FMJ line of high performance separates, the A18 is an ideal partner for the new CD17 CD player and is available in black or silver finish.

E&OE (April 2008)

Available Q2 2008

FMJ A18 Integrated Amplifier

Key Features of the A18 Integrated Amplifier

Pre-amplifier

- Logic controlled input/output switching for accurate quiet operation
- Precise electronic control of volume bass and treble
- Processor mode for use with AV processors/receivers

Connectivity

- Six RCA Phono line level rear panel inputs – plenty for even complex systems
- Additional front panel line level input (3.5mm stereo jack) for portable music players
- High quality Moving Magnet phono input with grounding post
- Two tape outputs on RCA Phono for CD recorders / PVRs
- Pre-amp output for adding additional power amplifiers or bi-amping with P38
- Front panel headphones jack on 3.5mm socket

Power Amplifier

- 50wpc continuous power output (two channels driven, 8 ohm load)
- Oversize heatsink ensuring cool running
- Dual layer PCB enabling optimum circuit design in all areas

Power supply

- Toroid mains transformer
- High capacity power supply with “star earthing” for minimal ground noise
- Switchable mains power inlet 110-120v / 220-240v

General

- Supplied with CR10 system remote control
- All gold plated connectors
- Large, clear 9 character VFD display
- Size – 430mm (17”) wide, 332mm (13.1”) deep, 85mm (3.3”) high
- Weight 7.2kg (15.9lbs) nett, 9.1kg (20.1lbs) packed

(E&OE April 2008)
