

ARCAM

FMJ A38 Integrated Amplifier

- 105wpc Integrated Current Feedback amplifier
- Ultra Stable thermal management
- Hermetically sealed input switching
- Ultra wide band power amplifier
- Studio grade electronic volume control
- Menu driven advanced control system
- "Mask of Silence" & Stealth Mat EMC damping
- SDS resonance damped chassis
- Optional MM/MC phono stage
- Eight page CR90 learning remote control
- Class leading sound quality

A38 Integrated Amplifier

With over 30 years of audiophile engineering experience, Arcam is one of the UK's most respected audio companies. The new A38 stereo integrated amplifier is the latest in a long family line of award winning HiFi.

The A38 design team was given a simple goal; to develop the best performing stereo amplifier Arcam had ever produced. Although a huge task, the team dug deep into the basic structure of amplifier design and the result was a remarkable improvement in fidelity.

An in-house research project yielded a wealth of information concerning the influences of thermal conditions on power amplifier performance. As a result the A38 features a number of new technologies which practically eliminate thermal modulation of audio signals and ensure truly dynamic and enthralling reproduction. New Sanken output devices and dramatically improved thermal coupling provide an extremely stable device temperature resulting in much improved linearity.

The massive torroid based power supply delivers effortless power with a new low noise topology improving transient response. A new pre-amplifier design, featuring hermetically sealed "reed" relays from Arcam's range topping C31 pre-amplifier; deliver a wonderfully transparent signal to each power amplifier. Reed relays offer extremely low contact resistance and virtually

infinite life span. An all new volume control (Burr Brown PGA2320) gives unprecedented linearity and noise performance allowing fine details to be reproduced in startling clarity.

The A38 replaces the A32 in the FMJ range and will be available in black or silver finish.

Price: TBA

E&OE (January 2008)
